

# SuMoCoS

Sustainability and Mobility  
in the Context of Smart Cities

## Industrial IoT – Improving manufacturing processes

# About erminas

- Industrial IoT Solutions and Enterprise Applications
- Founded 2009
- Located in Oldenburg (Germany)
- 25 employees
- Customers in Europe, North America, and Asia
- Fields
  - Consulting
  - Prototyping
  - Development
  - Applied Research

# What is Industrial IoT?

- IoT: „Extension of network connectivity and computing capability to objects, devices, sensors, and items not ordinarily considered to be computers“ (Internet Society, The Internet of Things (IoT): An Overview, 2015, <https://www.internetsociety.org/resources/doc/2015/iot-overview>)
- Industrial IoT:
  - IoT in industrial environment

# Technologies of Industrial IoT

# Technologies of Industrial IoT

Edge  
Computing

# Benefits of Industrial IoT

- Digital Twin: Digital replica of physical entity
  - Simulation
  - Reproducing
  - Optimize
- Resource-optimized production
- Control of machines off-site

# Benefits of Industrial IoT

- Pay-per-use charge
  - Example: Rolls Royce turbines „Power-by-the-hour“
- Changing social environment
  - Elderly people
  - More specialized / Less specialized
  - Job-changing

How does an IIoT project  
work like?

# Types of projects

- Green-field approach
- Retrofitting existing machines
- Parallel development (e.g. via CV)

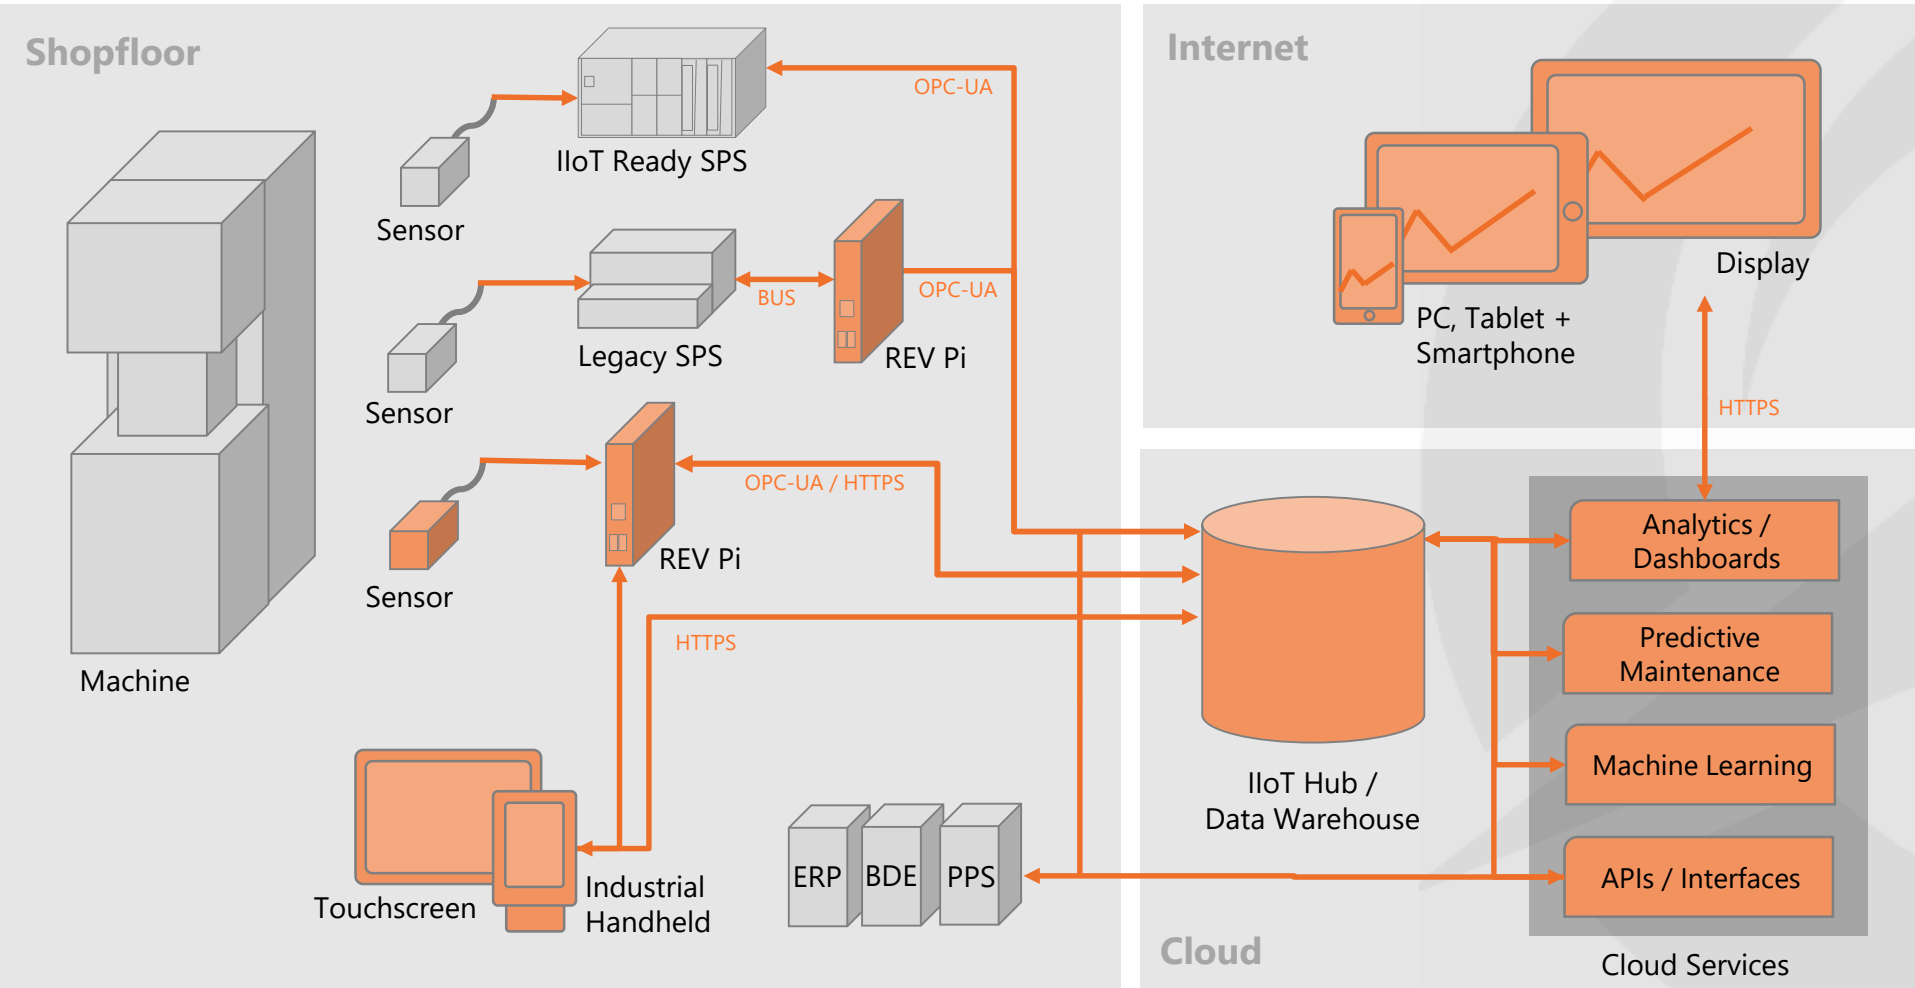

# Steps

1. Understanding requirements of business
2. Talking to involved people / stakeholder
3. Create possible solution with customer
4. Build and evaluate prototype
5. Build solution
6. Enhance solution (repeat all steps above)

# Retrofitting

# Cost-efficient Retrofitting

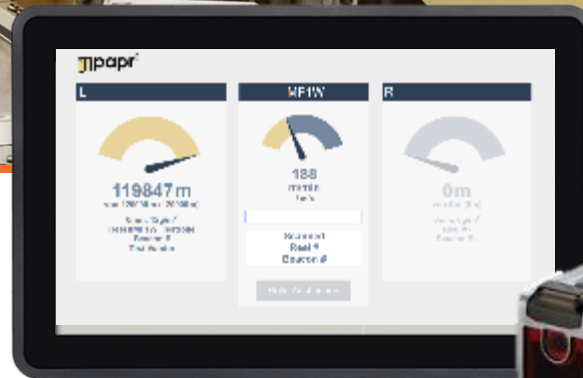

# Real World Examples

SmartTransport  
SmartProduction  
SmartEnergy  
SmartAgriculture

# Train Water Supply

- Prevent water usage by unauthorized people
- Control machines off-site

- Real-time inventory in paper industry (e.g. corrugated board)
- Planning of production processes and optimize stock
- Identify paper reels by Bluetooth beacons
- Independent Retrofitting solution
- Edge computing without required Cloud

- Retrofitting as a custom product development project
- IoT Strategie,
- IoT Hard and Software Development
- Global production of custom hardware
- More than 100 customers within DACH region

# Electric vehicle charging

Improving charging points

by integrating into Smart Grid

Make better use of renewable energies

# Machine Learning

Identify and predict electrical shorts at furnaces

# Hydroponics – Smart Greenhouse (Research)

Improve growing plants in controlled environment  
(independent of vegetation period)

# Tracking of Suppliers (Research)

Identify deliveries at construction areas  
via camera identification and machine vision
